

Northstar Lipids

Quality Policy

It is, naturally, our aim to supply products which meet the technical and commercial requirements of our customers on a consistent and continuous basis, even when Mother Nature decides otherwise!

In order to achieve this, we work to agreed specifications and utilise approved processors and suppliers who are operating to recognised International standards for oil processing and who have recognised environmental and/or HACCP policies.

However, the nature of the speciality oil supply chain often makes it difficult to guarantee this; in such cases we approve the supplier following a satisfactory review of the manufacturing facilities and procedures and/or after 3 commercial batches have been supplied to the agreed specification.
